SCIENTIFIC AND TECHNICAL COOPERATION BETWEEN THE SOVIET UNION AND POLAND

Zygie Radomskie
Radom, 6 Nov 1953

The Polish-Soviet Commission for Scientific and Technical Cooperation (Polsko-Radzicka Komisja Wspolpracy Naukowo-Technicznej) held meetings during the past few days in Warsaw.

The commission reviewed the existing problems in scientific and technical cooperation between both countries and discussed reciprocal commitments.

In accordance with the protocol signed by both parties, the Soviet Union will give the Polish People's Republic technical assistance by transmitting the following:

1. Plans for chemical plants and a plan for a building materials plant.
2. Working designs of the most modern types of metallurgical and power equipment, metal-cutting machine tools, transportation and construction equipment, and apparatus and tools for the consumer goods industry.
3. Technical blueprints, plans, etc., on the technology of production of dyes, pharmaceutical preparations, ceramic products and others, and recipes for vitamin preparations and confections.

The USSR will give Polish agriculture specimens of seeds for grains, oleaginous plants, leguminous plants, and other cultivated plants. In addition, Soviet specialists will give advice on how to improve the health of farm animals.

As requested by Poland, the protocol anticipated that the various plans prepared by the Polish project design offices will be appraised by the Soviet Union.

In addition, the Soviet Union will admit a group of Polish specialists to obtain production experience in industrial plants and construction offices, in scientific research institutions, and in other institutions of the Soviet Union. The Soviet Union will also send Soviet specialists to the Polish People's Republic to give on-the-spot technical assistance.

The Polish People's Republic on its part will give the Soviet Union its technical blueprints, plans, etc., on the production of certain products in the chemical industry, glass industry, and other branches of industry. The Polish government will also make it possible for a group of Soviet specialists to become acquainted with achievements in particular branches of the national economy.

In accordance with the principles of scientific and technical cooperation between the Soviet Union and the people's democracies, the distribution of scientific and technical assistance, as well as the transfer of technical blueprints, plans, etc., such as plans for industrial enterprises, plants, residential buildings, cultural and social facilities, drawings and estimates, machines and equipment, implements, tools, and descriptions and estimates of technological production processes, takes place without charge.
